The exhibition “Throwing Gestures” investigates (political) gestures by de-/contextualising their media representations, performances, re-enactments and drawings. The artworks thereby analyze power structures, whether they are visible, invisible or become manifest through material or embodied forms such as architecture or discipline.

The symposium investigates the interdependencies that exist between gestures and ubiquitous, globally networked technologies. To display and displaying oneself gains greater significance within the context of the unrestricted and instantaneous global exchange of video material as well as in an everyday world increasingly defined by sensors and computers. Thus, the meaning of presence and publicness changes, evolves and new forms appear.

Panels:
"Im/Perceptible", "Gesture and the Political", "Staging the Entanglement between Arts and Humanities"
